Dear ,

An assessment by New Mexico Tech concludes that new oil and gas development could put the drinking water of nearly a million people at risk, and divides our communities into zoning districts for destructive fossil fuel projects. We must protect residents from oil and gas activity and preserve a clean environment. We should be working on developing clean energy alternatives, NOT more fossil fuels.

We will not tolerate zoning the county to make less densely populated areas the targets for these negative impacts. We urge you to move toward to a just transition to renewable energy that will create environmentally sustainable and culturally appropriate economic development. We can bring jobs through some of the fastest growing sectors such as wind and solar. We're not willing to risk our precious little water for an industry that is on its way out.

It is outrageous that the Commission would even consider giving preferential treatment to wealthier, more populated areas via a new oil and gas ordinance. The potential for negative impacts on any citizens' health or drinking water, no matter the population size or density, is unacceptable. Please oppose putting any of the county's lands, aquifers, air or people at risk of contamination!

Sincerely,

Judith Hart

Dear ,

An assessment by New Mexico Tech concludes that new oil and gas development could put the drinking water of nearly a million people at risk, and divides our communities into zoning districts for destructive fossil fuel projects. We must protect residents from oil and gas activity and preserve a clean environment. We should be working on developing clean energy alternatives, NOT more fossil fuels. And why would our county commissioners brush aside a scientific study by a reputable college and treat it equal to a company study used to sway opinions so they can make money.

We will not tolerate zoning the county to make less densely populated areas the targets for these negative impacts. We urge you to move toward to a just transition to renewable energy that will create environmentally sustainable and culturally appropriate economic development. We can bring jobs through some of the fastest growing sectors such as wind and solar. We're not willing to risk our precious little water for an industry that is on its way out.
