Dear ,

Oil and gas development in Sandoval County is likely put the drinking water of nearly a million people at risk, and divides our communities into zoning districts for Destructive fossil fuel projects, that contributes to the healthcare costs of air pollution, and to Climate Change as the U.S. government report released this November 2018 documents. We must protect residents from oil and gas activity and preserve a clean environment. We should be working on developing clean energy alternatives, NOT more fossil fuels.

Reject the Science Ordinance which provides little to no protection for public health, air quality or water contamination. Go back to the Citizens Working Group Ordinance which has all of these protections and more.

We urge you to move toward to a just transition to renewable energy that will create environmentally sustainable and culturally appropriate economic development. We can bring jobs through some of the fastest growing sectors such as wind and solar. We're not willing to risk our precious little water for an industry that is on its way out.

The potential for negative impacts on any citizens' health or drinking water is unacceptable. Please oppose putting any of the county's lands, aquifers, air or people at risk of contamination!

Sincerely,

June Parsons

Bernalillo, NM 87004

It is a bit unfortunate that we have to rely on a small group of people for our lives and our children's lives and our grandchildren's lives to be spoken for when it is apparent to anyone who can witness the inherent destructive nature of a dirty industry such as the oil and gas industry. But, here we are, asking again for protection. One has to wonder why it is that strangers are even allowed to have the power over our communities at all when it has been clear WE DON'T WANT to be fracked up. It is clear that this State needs to conserve water, not poison it, not risk it. We need to focus entirely on clean energy jobs and a safe place for people to live and love.

It is empirically evident to everyone by now that our air and water and soil and ecosystems alive with native flora and fauna are endangered permanently by pollutants. I have grandchildren and I suspect one of you have grandchildren and have concerns about their quality of life and perhaps even their survival.

New Mexico, and especially in rural, poor, and native lands areas have been sacrificed for decades for either private profit or national security. I grew up in oil and gas field operations in the four corners area. Many of my family and my friends relied on the oil and gas industry for jobs. Some died. There has been and continues to be a short-sighted notion that jobs now Trumps lives down the road meaning seven generations that do not have a voice. I feel a little bit like we're trying to protect the last trufflera tree here as in doctor Seuss's The Lorax! That prophetic book is profoundly relevant to the decisions being made now and I can only Hold Onto hope that you will be willing to consider the larger picture in our land of enchantment and use all opportunity to turn around our Energy Future to 100 percent clean energy jobs. I speak for the trees, literally, but I do not have a vote here.

Please... Have the ears to hear and heart to act courageously on behalf of all the voiceless. Be fully aware and concerned of the devastating impact of an industry who has known for decades that we can't survive the harm done. You can't. Your grandchildren can't. Unless someone like you cares a whole awful lot, Nothing is going to get better... it's not. Thank you for listening.
